

## Acne Treatment Starter Kit

The key to building patient trust in product efficacy

### What is included in the kit?

The NOON™ Acne Treatment Starter Kit includes a 3-4 week home care regimen to further support and enhance the results of professional in-clinic treatments.

This highly efficacious kit not only prepares the skin for professional in-clinic treatments, but also paves the way to reducing oily and acne-prone skin concerns such as inflammation and excess sebum production, while at the same time reducing the bacterial load that causes breakouts.

## Acne Treatment - A 360° Approach to Success

Acne is a "long-term" multi-factorial skin condition of the pilosebaceous unit, that involves infection and develops due to blockages in the skin's hair follicles and sebaceous gland. An effective acne treatment requires a holistic approach that combines treatments at the clinic, and the use of active ingredients at home by the patient.

Without a home care regimen complementary to in-clinic treatments, it is not possible to significantly improve the skin.

## Who is this kit for?

Many customers are undecided whether to buy a series of products that are essential for the treatment of acne, or are afraid of the side effects associated with this type of treatment.

The NOON™ Acne Starter Kit was developed with the professional in mind to strengthen patient trust in regards to active ingredients and treatment recommendations, all at a relatively fair price.

This advanced starter kit includes a 3-4 week treatment regimen designed to deliver results.
